Developer Setup, Verification & End-to-End Demo Guide

PRODUCTION READY

This document serves as the formal handoff guide for engineering teams to set up, test, build, and demonstrate the **Dinasari Food Courier (DFC)** multi-surface monorepo.

1. Platform Links & Repositories

Resource	Target / URL	Environment / Details
GitHub Repository	<code>https://github.com/beeze-apps/DFC-APP.git</code>	Branch: <code>main</code> (Production source)
Live Admin Web App	https://dfc-app-bdb4e.web.app	Hosted on Firebase Hosting
Firebase Console	Project ID: <code>dfc-app-bdb4e</code>	Region: <code>asia-south1</code> (Mumbai)
Architecture	Turborepo Monorepo	Next.js 15, Expo SDK 54, React Native, Firebase AI

2. Seed Credentials for Team Testing

The live Firestore database is pre-seeded with accounts for each operational role. Use these to test cross-role interactions:

Role	Email Credential	Password	Phone	Scope / Access
 Admin	<code>admin@dfc.test</code>	<code>dfc-admin-2026</code>	<code>+919876500001</code>	Kanban Board & 3D Situation Map
 Customer	<code>customer@dfc.test</code>	<code>dfc-customer-2026</code>	<code>+919876500002</code>	Multimodal AI Ordering & Order Tracking
 Vendor	<code>vendor@dfc.test</code>	<code>dfc-vendor-2026</code>	<code>+919876500003</code>	Meenakshi Medicals (EAN-13 Scanner)
 Rider	<code>rider@dfc.test</code>	<code>dfc-rider-2026</code>	<code>+919876500004</code>	Doorstep UPI QR & Cash Calculator

3. Machine Setup & Command Reference

Step 1: Clone Repository & Install Dependencies

```
# Clone repository
git clone https://github.com/beeze-apps/DFC-APP.git
cd DFC-APP

# Install all workspace dependencies
npm install
```

Step 2: Run Next.js Admin Web Locally

```
# Start dev server on http://localhost:3000
npm --prefix apps/admin-web run dev

# Run production static build verification
$env:NODE_ENV="production"; npm --prefix apps/admin-web run build
```

Step 3: Run Expo Mobile Apps

```
cd apps/mobile

# Start Expo Metro Bundler
npm run start
```

- Press **a** for Android Emulator.
- Press **i** for iOS Simulator.
- Scan terminal QR code using **Expo Go** app on physical devices.

4. End-to-End Demo Walkthrough

1 Customer AI Ordering **Customer App**

Sign in as `customer@dfc.test`. Use Tamil voice input or upload a prescription photo. Gemini 2.5 Flash extracts items, prices them in integer paise, and displays the order tracking screen with a 4-digit Delivery OTP.

2 Admin Dispatch & Kanban **Admin Web**

Log in at dfc-app-bdb4e.web.app as `admin@dfc.test`. Drag and drop orders across the 4 Kanban pillars or switch to 3D spatial map view of Madurai.

3 EAN-13 Barcode Packing **Vendor App**

Log in as `vendor@dfc.test`. Tap **EAN-13 SCANNER** on an active order. Verify barcodes, batch numbers (`B1042`), and expiry dates (`12/28`) before marking ready for pickup.

4 Doorstep UPI QR Payment **Rider App**

Log in as `rider@dfc.test`. Open task and tap **DOORSTEP UPI QR**. Shows exact-amount SVG QR code for GPay/PhonePe scan or switch to cash mode with change breakdown down to ₹1 coin precision.

5. Building Standalone Android APK (EAS CLI)

To generate standalone `.apk` packages for physical device testing without Expo Go:

```
# Install EAS CLI globally
npm install -g eas-cli

# Login to Expo account
eas login

# Trigger Android Preview APK build
cd apps/mobile
eas build -p android --profile preview
```

✅ **Verification Status:** All packages pass TypeScript `tsc --noEmit` verification, Next.js 15 static export is deployed to live hosting, and Firestore database is fully seeded.
